Topic 2: Project Overview

Simple RAG Project - Requirements Guide

Explain what the project does at four levels: one sentence, beginner, technical, and interview-ready.

What this topic requires

A clear explanation of the problem, source of information, retrieval step, LLM answer generation, and why RAG is used.

Required understanding and workflow

1. State the user problem.

2. Trace a question from user to answer.

3. Name the real data source.

4. Explain why direct LLM-only answers are insufficient.

5. Keep implementation claims tied to repository evidence.

Workflow

```
User question -> application -> retrieval -> context -> LLM -> answer
```

Evidence rule

Describe implementation only after repository inspection. Missing features must be labeled NOT IMPLEMENTED IN THIS PROJECT. Recommendations must be labeled PRODUCTION RECOMMENDATION - NOT CURRENTLY IMPLEMENTED.
