Topic 5: Complete Project Architecture

Simple RAG Project - Requirements Guide

Show the actual frontend, backend, embedding model, vector database, retriever, prompt builder, and LLM connections.

What this topic requires

A Mermaid architecture diagram adapted from code, not a generic diagram. Every component must be verified or labeled absent.

Required understanding and workflow

1. Identify system boundaries.

2. Trace request and response paths.

3. Connect ingestion components separately from query components.

4. Label integrations and configuration points.

5. Mark missing components explicitly.

Workflow

```
User <-> frontend <-> API <-> query pipeline <-> retrieval and generation
```

Evidence rule

Describe implementation only after repository inspection. Missing features must be labeled NOT IMPLEMENTED IN THIS PROJECT. Recommendations must be labeled PRODUCTION RECOMMENDATION - NOT CURRENTLY IMPLEMENTED.
