Topic 6: Complete RAG Pipeline

Simple RAG Project - Requirements Guide

Explain the full lifecycle from document ingestion to question answering.

What this topic requires

The ingestion path is documents -> loader -> extraction -> cleaning -> chunking -> embeddings -> vector database. The query path should connect retrieval to prompt construction and generation.

Required understanding and workflow

1. Describe Phase A: data ingestion.

2. Describe the query-time path.

3. Identify where metadata travels.

4. Identify failure points.

5. Connect each phase to actual code.

Workflow

```
Documents -> loader -> text -> chunks -> embeddings -> vector store -> retrieval -> prompt -> LLM
```

Evidence rule

Describe implementation only after repository inspection. Missing features must be labeled NOT IMPLEMENTED IN THIS PROJECT. Recommendations must be labeled PRODUCTION RECOMMENDATION - NOT CURRENTLY IMPLEMENTED.
