Topic 8: Text Extraction

Simple RAG Project - Requirements Guide

Explain how raw files become usable text and whether page numbers or metadata are preserved.

What this topic requires

A reader should understand the transformation from document to pages or records to text, and why metadata helps with citations, filtering, and debugging.

Required understanding and workflow

1. Locate extraction code.

2. Describe page or record boundaries.

3. Describe cleaning or normalization.

4. List preserved metadata.

5. Explain how downstream chunks use that metadata.

Workflow

```
Document -> loader -> pages/records -> extracted text + metadata
```

Evidence rule

Describe implementation only after repository inspection. Missing features must be labeled NOT IMPLEMENTED IN THIS PROJECT. Recommendations must be labeled PRODUCTION RECOMMENDATION - NOT CURRENTLY IMPLEMENTED.
