Topic 15: Reranking

Simple RAG Project - Requirements Guide

Explain the optional second ranking stage that improves the order of initially retrieved chunks.

What this topic requires

If absent, state: This project currently does not implement reranking. Then explain why production systems may add it after initial retrieval.

Required understanding and workflow

1. Check whether a reranker exists.

2. If present, document its model and inputs.

3. If absent, state the required phrase.

4. Explain initial Top-20 to best-5 as a conceptual example.

5. Describe quality and latency trade-offs.

Workflow

```
Query -> initial retrieval -> larger candidate set -> reranker -> best context
```

Evidence rule

Describe implementation only after repository inspection. Missing features must be labeled NOT IMPLEMENTED IN THIS PROJECT. Recommendations must be labeled PRODUCTION RECOMMENDATION - NOT CURRENTLY IMPLEMENTED.
